

***Listing of the Claims***

Please replace all prior versions and listings of claims with the following Listing of Claims.

1. **(Previously Presented)** A method for routing a facsimile having at least one page to at least one recipient, comprising the steps of:

dividing text of at least one page of the facsimile into a plurality of blocks;  
converting the text in the plurality blocks of at least one page of the facsimile into data;

analyzing each of the plurality of blocks to isolate at least one recipient block, wherein said recipient block is one of the plurality of blocks on at least one page of the facsimile;

locating an address of said at least one recipient by analyzing said recipient block and analyzing address data to determine an address corresponding to said at least one recipient; and  
sending said facsimile to said at least one recipient at said located address.

2. **(Previously Presented)** A system for routing a facsimile having at least one page to at least one recipient comprising:

a fax server comprising:

a storage unit including an address database;

a data processor, said data processor programmed to:

divide text of the at least one page of the facsimile into a plurality of blocks;

convert the text in the plurality of blocks of at least one page of the facsimile into data;

analyze each of the plurality of blocks to isolate at least one recipient block, wherein said recipient block is one of the plurality of blocks of on at least one page of the facsimile;

locate an address of said at least one recipient by analyzing said recipient block and analyzing said address database to determine an address corresponding to said at least one recipient; and

a transmitter in communication with said data processor for sending said facsimile to said at least one recipient at said located address.
